

GENERATION III
WITH CERAMIC SEAL

ELECTRIC WATER PUMP

The world's most advanced water pump has just been upgraded for even better performance and reliability. The new, revolutionary EWP is a performance accessory with universal fitment to all models by mounting in the bottom radiator hose.

For those who want the best performance an optional EWP Controller is also available. The Controller electronically adjusts coolant flow to the temperature you set – even after engine shut-down. That's control !!"

- Full power released to the wheels
- Better management of the cooling system
- Efficient engine running at all times

Soon, all cars will have an Electric Water Pump

RACE PROVEN POWER

For the second year, the Prodrive Ferrari 550 Maranello used two EWPs for success in the LeMans events in Europe and USA.
